F2 wet/dry wean/finish feeder

Creative

The Crystal Spring Wet/Dry concept has proven over the years to be the best, most profitable feeder design. The pig is given a choice to feed on dry feed on the shelf or mix it with water in the trough, which increases daily gain and decreases both feed and water waste.

The F2-Series' EZ-Adjust® patented adjusting system is designed for easy, repeatable and extra fine feed flow adjustment of .06" for a range of over 2".

The F2-Series supports up to 16 pigs per space for up to 160 pigs per feeder (F2-572) with a feed capacity of up to 330 lbs.

Wean to Finish Trough Barriers and a Lower Lip allow this feeder to be used in Wean to Finish and large pen facilities.

Quality

Crystal Spring maintains the highest level of quality and uses only 304 Series Stainless Steel heavy duty 12, 14 and 16 gauge construction. All parts are lapped and folded to eliminate sharp edges and to strengthen wear points. The feeder is welded together for a strong long-lasting construction.

Practical

EZ-Adjust® patented adjusting system provides easy, repeatable and fine feed flow adjustment. Multiple holes and knockouts allow mounting in many situations. The F2-Series is available with a double (standard) or single sided feed trough.

Additional accessories are available: 10" hopper extension, high moisture feed shelf, drop tube mounts and mounting brackets, angles and channels.
